Clinical

Summary	Description	Resources
Specify Priority Group for an Immunization Record	The user is able to select a priority group from the newly added dropdown field on the Step 3: Record Vaccinations screen.	

Summary	Description	Resources

MIPS 2023 Reporting Update	The MIPS Dashboard is now ready for 2023 reporting. There are some important steps your practice needs to follow in order to participate in the MIPS Promoting Operability 2023 performance period. You can review that information here. The following modifications were made to the MIPS Dashboard for 2023 Reporting:
	
	• All Measures - Scoring, Exclusion and Measurements we updated, as appropriate, to reflect the CMS Promoting Interoperability verbiage for 2023 reporting.
	• Query of the PDMP Measure:
	  ◦ This measure is now a required measure for 2023 reporting.
	• Provide Patients Electronic Access to their Health Information Automated Measure:
	  ◦ Signing a visit note will now send a CCDA file (for practices configured with the FHIR API's) to the FHIR APIs. Once the CCDA is received by the FHIR API, the patient will receive an invitation with instructions on how to access their data using the FHIR API's.
	  ◦ Updated the measure numerator logic to now require providing both OnPatient Portal Invitations (sent via the OnPatient Access Screen) AND FHIR Welcome Emails sent to the patient for each visit in order to meet the numerator.
	• Enabling Exchange Under TEFCA Measure:
	  ◦ Added the ability for Eligible Clinicians to attest to meeting the requirements of this measure.

Summary	Description	Resources
API Appointment Detail Update	We have updated the Appointment details API to include the 'recur_start_date' and 'recur_end_date' responses for recurring appointments.	

Resolutions

Summary	Description
Appointment Profiles Not Linking with Appointment Appointment Templates	Resolved an issue in which appointment templates and their linked appointment profiles were not appearing with the appointment templates scheduled in Daily, Exam Room, and Weekly views.
Search using patient's chart ID	Resolved an issue when a user searches for a patient using their chart ID number, the two extra characters "ID" will be removed from the search field.
