

How do I set up EPCS for multiple states?

07/24/2024 4:20 pm EDT

If you electronically prescribe controlled substances in more than one state, the additional locations can be added to your DrChrono account by our support team.

You must have already enabled e-Rx and EPCS for one location before adding any additional locations.

Once you complete your initial verification and set up for [EPCS with ID.me](#), you will need to submit a [ticket](#) to our support team. Our team will set up these offices for you after we have all of the information.

In most cases, you will need:

- Provider's name
- DEA number for each state
- Physical address for each location

I need to add an additional prescribing location.

You will need to submit a [ticket](#) with the following:

- DEA Number for new state
- State License Number for new state
- Location Address for new state
- Phone Number
- Fax Number
- Location address of current location(s) you wish to retain

I need to replace my current prescribing location with a new prescribing location.

You will need to submit a [ticket](#) with the following:

- DEA Number
- State License Number
- Location Address
- Phone Number
- Fax Number
- Location address you are requesting to remove

I need to remove a prescribing location.

Please enter a [ticket](#) and provide the following information for the location you want to remove:

- DEA Number
 - State License Number
 - Location address you are requesting to remove:
-
