Downloading Patient Documents

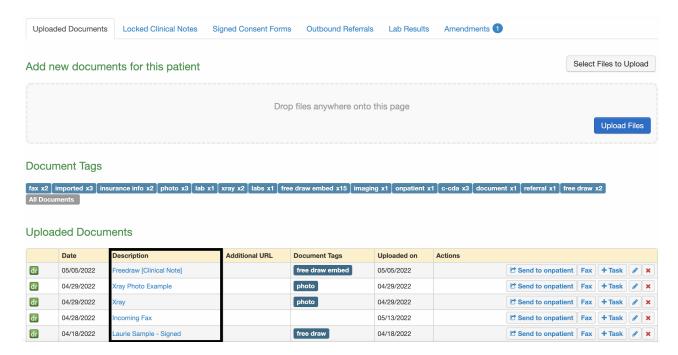

07/24/2024 1:50 pm EDT

If you need to export/download a patient's documents, you can do so from their chart.

• Go to a patient's chart and select **Documents** from the menu on the left.

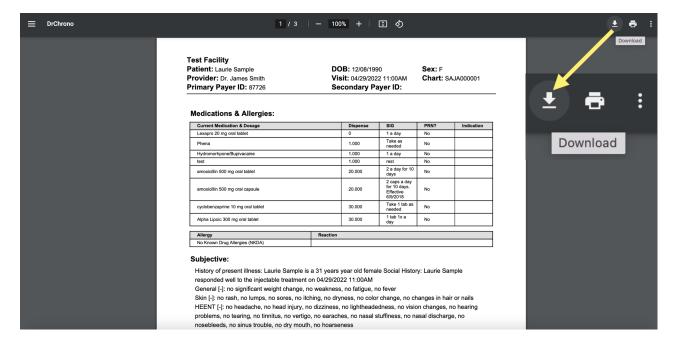

• Scroll down to the **Uploaded Documents** section. Click on the **Description** to view the document. Depending on your browser and computer, the document will open in another window or tab.

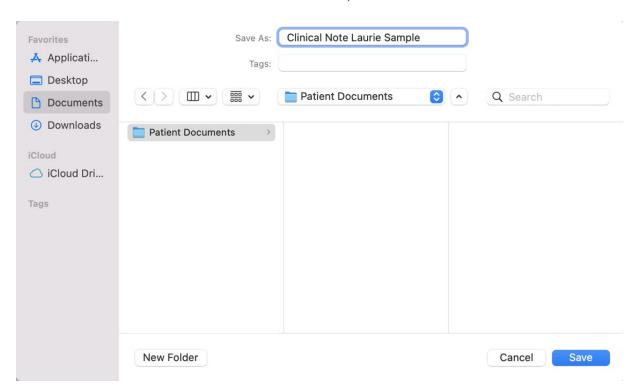

PDF documents can be downloaded by clicking on the arrow icon (

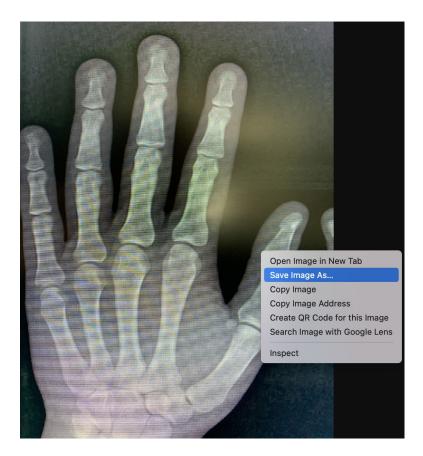

).

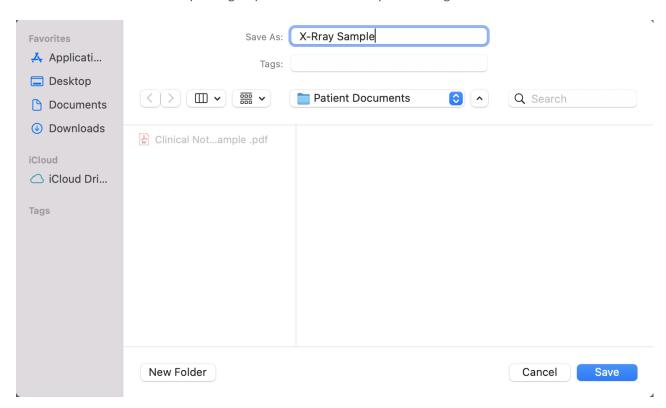

• You will then need to name and save the document to your device.

• For images, like clinical photos taken with the iPad, need to be right-clicked and saved.

• Name and save the file depending on your browser and computer settings.

• If you need to download Locked Clinical Notes, Signed Consent Forms, Outbound Referrals, Lab Results, or Amendments, click on the tab, view the document, and download.
