How do I view my patient's history and documents on the iPhone?
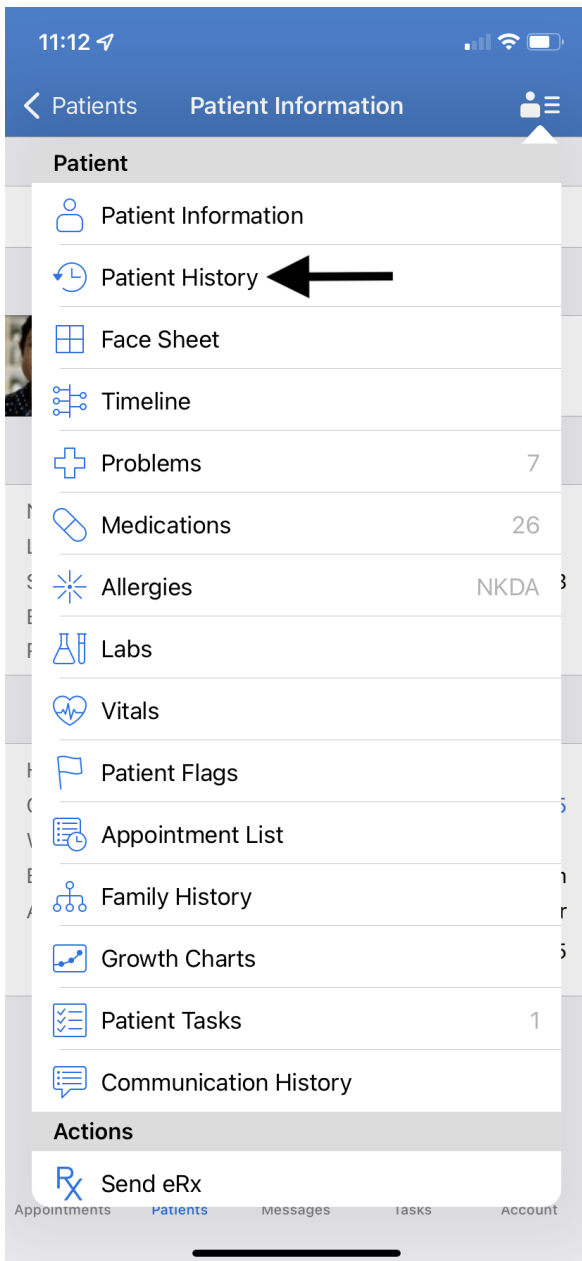

In the EHR app on the iPhone, all your patient's past documentation is accessible with patient history. Within patient history, you can access:

- Past clinical notes
- Patient documents
- Lab results
- Photos
- Imaging
- Videos

Patient History can be accessed through the patient menu (

) in the appointment or by searching for the patient. Select **Patient History** to view the documents.

When you select **Patient History**, you'll be presented with a list of all the patient's documents, clinical notes, lab results, imaging, photos, and videos. By tapping on the **Filter** button, you can select which kind of documents to be shown.
