

How do I use drawing tools on the iPhone?

07/24/2024 4:30 pm EDT

By using your mobile device as an extension of your EHR, you have the ability to upload any image, draw and annotate directly on the image, and then insert the image directly into your clinical notes.

You can download the EHR/EMR app to your iPhone [here](#). The finished free draw images will also be saved into your patient's documents for your records for you to fax or share with your patient.

- To begin, navigate to one of your templates that has the **free draw** object inserted. If you do not have any templates that have a free draw, refer to our guide on [adding images and attachments](#) to your clinical note.
- To start drawing on your images, tap on a free draw field.

The screenshot shows the mobile interface of an EHR/EMR app. At the top, the status bar displays the time 11:10, signal strength, Wi-Fi, and battery icons. Below the status bar is a blue navigation bar with a back arrow, the text 'App Store', and a 'Tools' label with three icons: a heart, a person, and a list. The main content area is divided into several sections: 'HPI' with a text input field and a pencil icon; 'Is the patient new to practi...' with a green toggle switch; 'Findings' with a section header; 'Does the patient have a his...' with 'Yes' and 'No' radio buttons; 'Test' with two input fields separated by a slash; 'Pain Location' with a text input field and a vertical ellipsis; 'Single' with a text input field and a dot; 'Patient Diagram' with a 'Free Draw' button featuring a drawing icon; 'Images/Documents' with a 'Free Draw' button also featuring a drawing icon, which is pointed to by a large black arrow; and at the bottom, 'Include in Note' with a green toggle switch and a 'Section Note' checkbox.

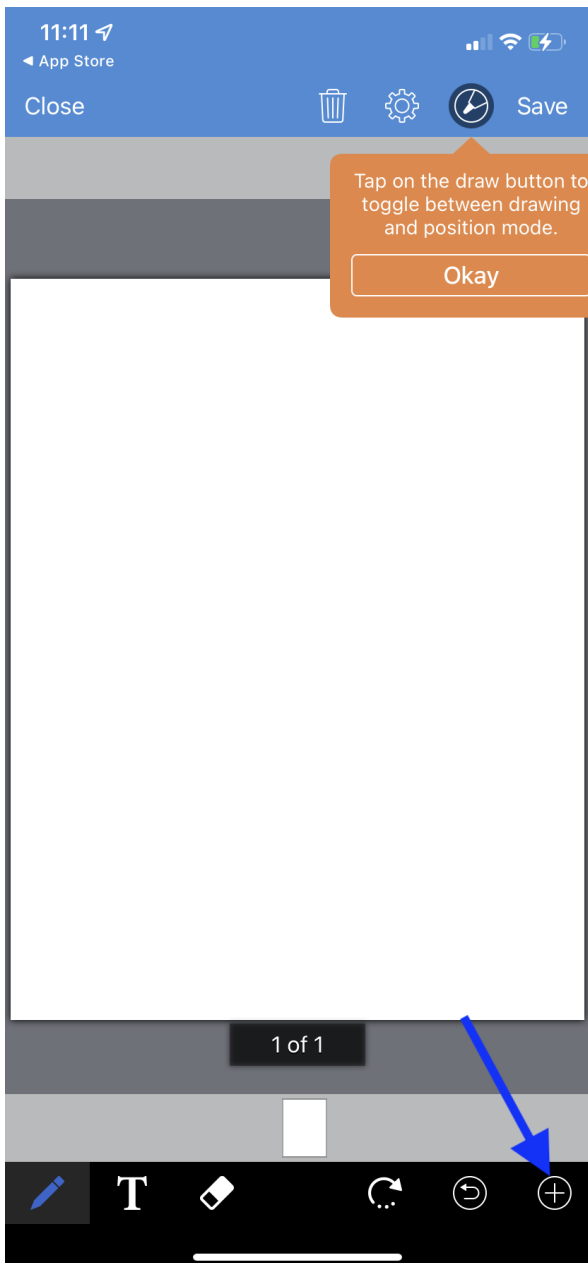

Once you tap on the free draw tool, you'll be presented with a page with either a blank page or an image.

By default, a blank page will open in which you can either take a photo with your device's camera, upload a photo locally from your device, or attach a note, lab result, image, or any other document stored within your EHR under patient documents.

Tap on the icon (

) to access the camera or to add images or documents. If you have customized your free draw page to open to a certain diagram or form, that picture will be shown instead.

The drawing tools are at the bottom of the page.

- The pencil icon (

) allows you to draw on the image.

- The text (

T

) icon will open a window for you to add typed text to the image.

- The eraser (

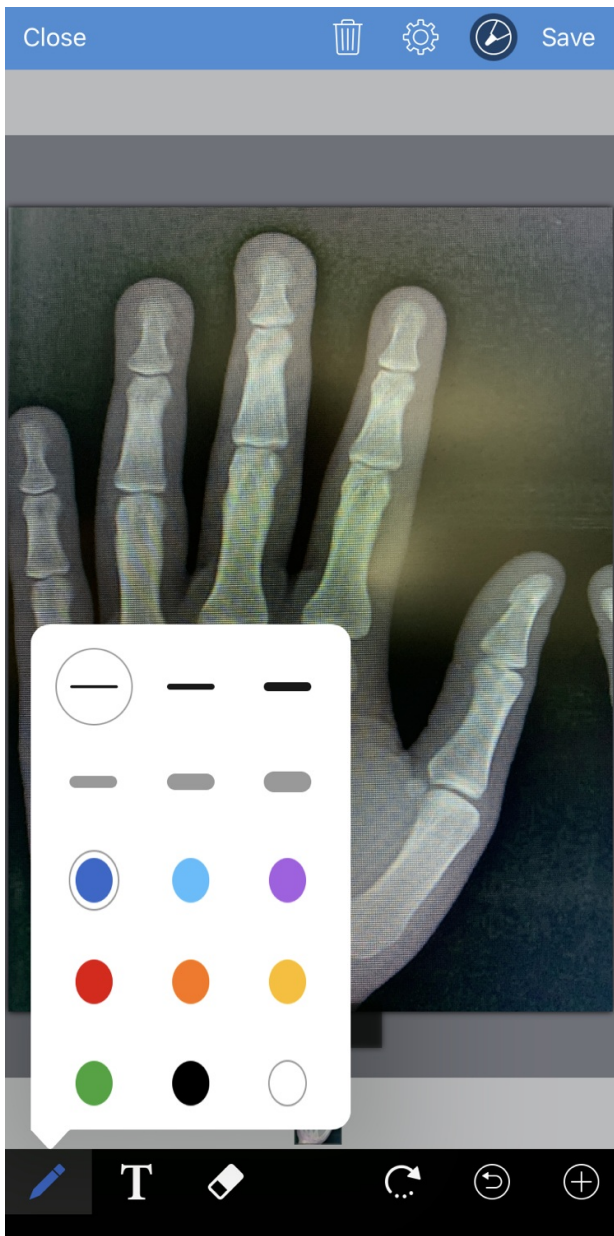

) allows you to erase your drawings

- To select a different color or change the thickness of a line, simply tap on the pencil icon (

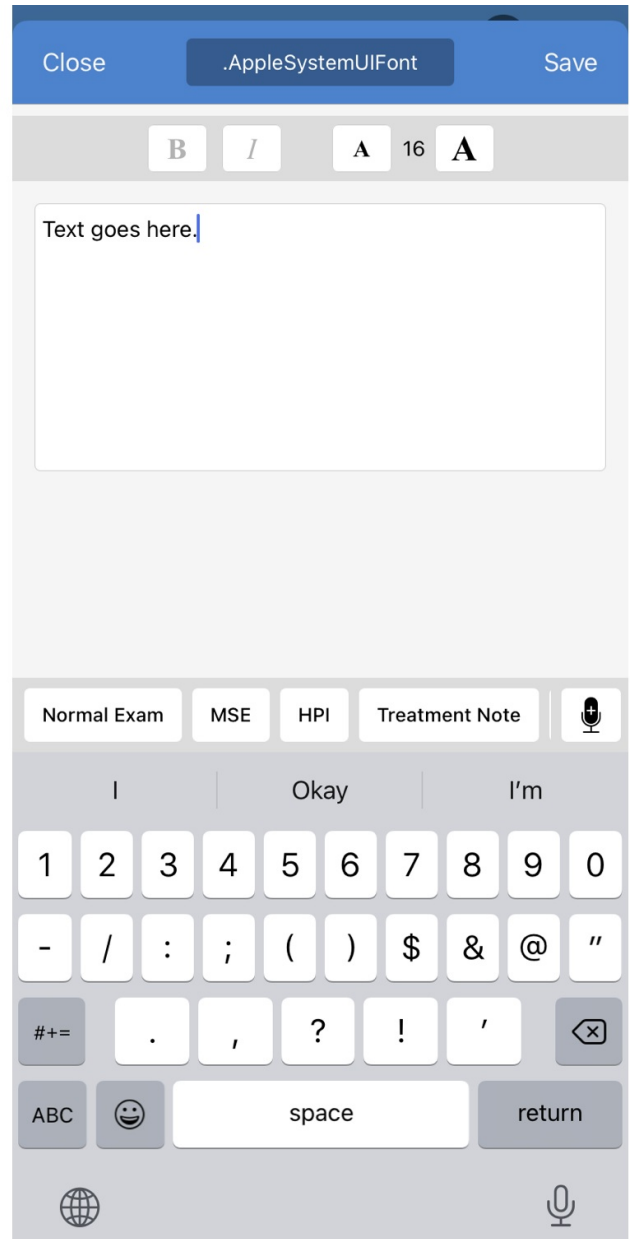

)

When you tap on the text (

T

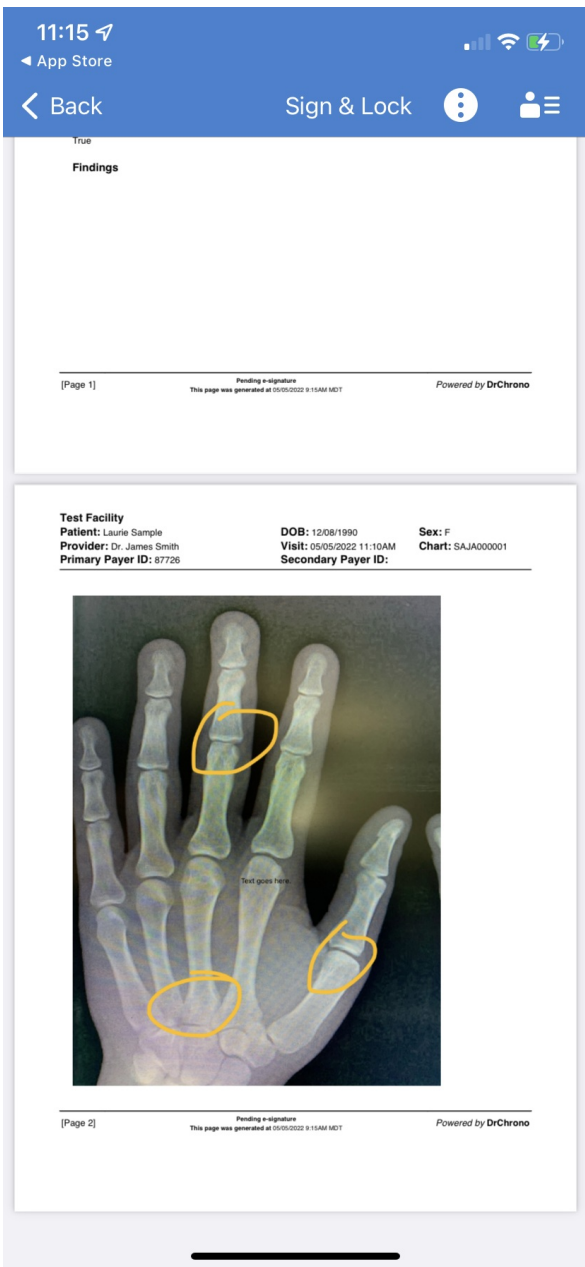

) icon, a text box will be added to the page. You can drag and resize the box as needed. Tap in the box to enter text. You have access to your macros and speech-to-text. Or you can enter your comments with the iPhone's keyboard.

Tap **Save** when you have finished.

The image will be saved in the clinical note.

The free draw will also be saved as a separate document in their chart.

Upload images, scanned paper documents, or PDFs downloaded from other electronic medical records.
