

Sending a Message or Picture to a Provider through OnPatient

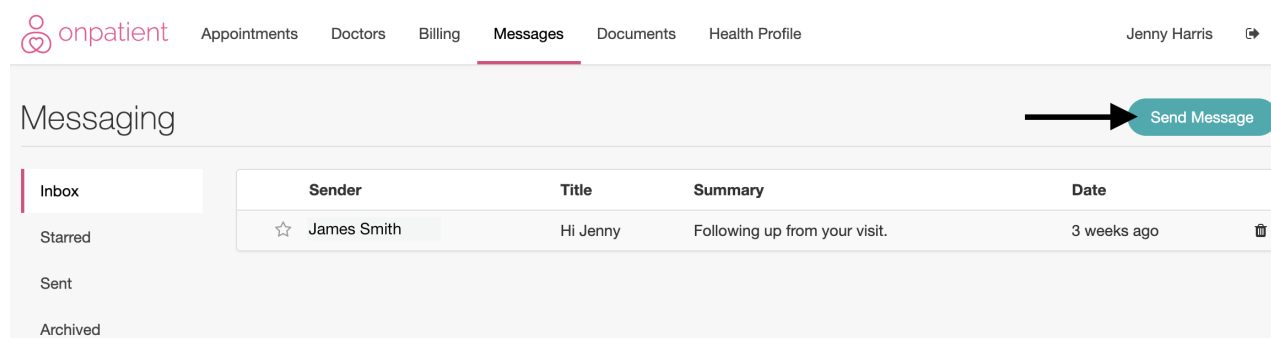

07/24/2024 9:10 pm EDT

The OnPatient portal provides a secure channel for your patients to send health information to you. The OnPatient messaging system is secure, intuitive, and a familiar method of communication.

1. When your patient first logs in, they will first come upon their dashboard. From there they will need to click on the **Messages** tab to access the messaging center.

2. The messaging center is structured similarly to an email inbox, with the option of viewing the inbox, starred messages, sent messages, and archived messages. For your patient to send you a new message, they will need to select the **Send Message** button to the right of this page.

3. The first step in sending a new message is to choose the **Recipient**. Your patient will be able to send messages to any provider within your practice group that has enabled the OnPatient communications setting under **Account > OnPatient Settings > Communication**.

Warning! If this is an emergency, please dial 911 or seek immediate medical attention.

Recipient

Jane Smith

Dr. James Smith

Dr. James Smith (on behalf of Michelle (Shelly) Harris)

Message

Attachment

Please select a doctor before adding attachments.

Send Message

4. Once the recipient is selected, the patient will then fill out the message that they wish to send you. If they would like to send a file or a picture, they can drag and drop the file to the attachment area or click on the attachment area to browse for the file. Click **Send Message** when finished.
