

# INTERNAL: How do I set up supervising signatures for a practice group?

07/24/2024 5:50 pm EDT

## Supervising Signatures in DrChrono

Supervising signatures are commonly necessary for nurse practitioners (or other mid-level providers) or specific setup requirements for a practice group. DrChrono currently only supports supervising signatures for clinical notes.

### Definitions:

- **Rendering provider:** The provider that is rendering the service for a patient and requires an additional supervising signature.
- **Supervising provider:** A provider that signs off on clinical notes on top of a rendering provider.

To set up supervising signatures for a practice group, locate the CRM profiles of the supervising and rendering provider and select **Doctor Setting** or each of them.

 Doctor Setting

Scroll down to the **Clinical Notes** section of this page.

### Clinical Notes

- Supervising provider flag  Set to True if Provider is a Supervising provider that can sign other provider's notes.
- Needs supervision flag  Set to True if Provider requires supervision, requires a supervising provider to sign off on their notes.

For the supervising provider, enable the **Supervising Provider flag** option.

For the rendering provider, enable the **Needs supervision flag** option.

Be sure to select **Save** at the bottom of the page.

Under the Practice Group Settings scroll down and check the box next to **Show/hide supervising provider dropdown** and update.

Show/hide supervising provider dropdown  Practice wide default, can be overridden in doctor settings

For instructions on how a supervising provider can sign off on a rendering provider's clinical note, refer to the guide found here: <https://support.drchrono.com/hc/en-us/articles/115000964187>
