

DrChrono v2026.06.0

06/03/2026 9:34 pm EDT

This release fixes the friction your team feels every day – unexpected logouts, slow medication screens, hard-to-find settings – and adds new tools for documentation, prescriptions, and billing that your team has been asking for.

Release date: June 15, 2026

Rolling out through: June – July 2026

IN THIS RELEASE

AI documentation

Prescription workflows

Real-time billing

Document

management

Platform reliability

Practice settings

Available now

⚙️ PLATFORM & RELIABILITY

Unexpected logouts are gone

Available now

Everyone

If your providers or staff have been getting logged out mid-session while actively working, that's fixed. This is one of the most common things we've heard from practices – we're glad to put it to rest.

- Sessions stay open while you're actively working
- No more lost work for providers mid-encounter or billing staff mid-session

Nothing to do. Already live as of June 15. Normal idle timeouts still apply when a session is genuinely inactive.

Medication list loads significantly faster

Available now

Providers

Clinical Staff

The medication list loads dramatically faster – especially for patients with long or complex histories where slowness was a real barrier during visits. The layout is also cleaner and easier to scan.

- ↗ Loads in under a second for most patients
- Nothing to do – you'll simply notice it's faster

🔍 BILLING & REVENUE CYCLE

Claims transmit the moment you submit them

Available now

Billing Staff Office Managers

When billing status changes to Bill Insurance or Bill Secondary, the claim now transmits immediately — no more waiting for a batch window. Error responses also come back the same day, so your team can correct and resubmit faster.

- < Claims reach the clearinghouse the moment billing status is updated
- ☐ Same-day error feedback — catch and fix issues without waiting overnight
- ☐ No workflow changes — the process for setting billing status is identical

Heads up for billing teams: When you see the status update to "In Process" almost immediately after submitting — that's correct. The claim has already been transmitted. No retraining needed.

→ [Claim submission process guide](#)

? PRACTICE OPERATIONS

Practice Settings: completely redesigned

Rolling out · Full availability June 30

Practice Admins Office Managers

Practice Settings has been rebuilt from the ground up — everything is reorganized, relabeled, and easier to find. Multi-location practices also get a new way to assign providers by location directly from settings.

- ☐ Settings reorganized for clarity — faster to find, harder to misconfigure
- ☐ Simplified permission and role management
- ☐ Location-based provider assignment for multi-location practices

Heads up for practice admins: Settings have moved — nothing has been removed. The guide below maps out where everything is now. Rollout begins June 18; fully available June 30.

→ [Manage Practice Settings — full guide](#) → [Interactive walkthrough](#)

Patient Chart Documents: overhauled

Rolling out · Full availability June 23

Front Desk Medical Assistants Providers

The Documents tab has been completely redesigned — your team can now search and filter instantly, fax multiple documents at once, and providers get a new Summary Widget in the Patient Summary tab for quick access during visits.

- ☐ Batch faxing — select multiple documents and fax them in one action
- ☐ Search, sort, and filter across all patient documents instantly
- ☐ Summary Widget surfaces the most relevant documents at a glance during visits

The Documents tab looks different. The interface has changed significantly. Share the walkthrough below with front office staff before rollout reaches your practice.

[→ Interactive walkthrough](#) → [Patient Chart Documents guide](#)

Create appointment profiles for any provider — without them logging in

Available now

Front Desk Practice Admins

Any staff member can now build an appointment profile and assign any provider as the owner — no more waiting for that specific provider to log in first.

- Removes the bottleneck of coordinating provider logins during scheduling setup
- ✗ Most valuable for large and multi-provider practices managing many templates

[→ How to add a new appointment profile](#)

COMPLIANCE & REGULATORY

Expanded patient intake form fields on mobile

Available now

Front Desk Clinical Staff

New intake field types — including updated assessment forms and patient status indicators — are now available in the mobile app, bringing it in line with what's already on web.

- Mobile intake forms now match the web experience
- More complete patient data collection during mobile check-in

[→ Patient intake form updates guide](#)

As part of this release, we are continuing our ongoing work to assess, monitor, and address any security vulnerabilities.

Early Access Features

The following features are available to select practices now, with full availability coming in the months ahead. Use the links below each feature to express interest or contact support.

Early Access

CLINICAL

Staff can send prescriptions on behalf of providers

Early Access · Full availability July

RNs & MAs Providers Practice Admins

Authorized clinical staff can now prepare and send non-controlled substance prescriptions on behalf of providers. Every action is audited, and providers maintain oversight through an approval queue.

- 🔗 Staff handle routine refills on behalf of providers — no shared logins required
- ☐ Full audit trail on every delegated action
- Reduces provider burden on routine prescriptions so they can focus on patient care

Practice admin setup required before clinical staff can use this feature. Delegation settings must be configured first.

→ [How to set up prescription delegation](#) → [Interactive walkthrough](#) → [Contact support to get started](#)

Prior authorizations initiate automatically when you prescribe

Early Access · Full availability July 9

[Providers](#) [Clinical Staff](#) [Prior Auth Coordinators](#)

When you prescribe a medication that requires prior authorization, the request starts automatically — right from within DrChrono. A companion feature also lets your team initiate any prior authorization retroactively if one was missed after a prescription was already sent.

- Prior auth requests start automatically at the point of prescribing
- ☐ Retrospective PA catches any missed authorizations after the fact
- ☐ Track and manage authorization status entirely within DrChrono

Note on Retrospective PA: The pharmacy must initiate the request on their end before it will appear in DrChrono.

→ [Express interest in early access](#) → [New prior authorization workflow](#) → [Interactive walkthrough](#)

EverHealth Scribe: notes look exactly as intended in DrChrono

Early Access · Full availability July

[Providers using EverHealth Scribe](#)

Formatting from EverHealth Scribe — bold text, headers, bullet points — now carries over into your DrChrono chart exactly as it appeared. No more manual reformatting after generation.

- ☐ AI-generated note formatting preserved in DrChrono — no cleanup required
- ☐ What Scribe produces is exactly what your chart shows

This improvement will roll out to all EverHealth Scribe users automatically in July. To get access now, or to add EverHealth Scribe to your plan, contact support.

→ [Contact support to get started](#)

EverHealth Scribe: CPT code suggestions that follow billing rules

Early Access · Full availability July

[Providers using EverHealth Scribe](#) [Billing Staff](#)

EverHealth Scribe now suggests CPT codes in AI-drafted assessments that already follow billing rules — correct code ordering and payer-specific requirements built in from the start. Less manual review, lower

denial risk.

- ☐ Code suggestions follow billing rules from the moment they're generated
- ☐ Fewer manual corrections needed after AI-assisted encounters
- ☐ AI code suggestions are a starting point — clinical and billing review before submission is still required

Available to EverHealth Scribe users. To add Scribe to your plan or to enable this feature for an existing Scribe account, contact support.

→ [Contact support to get started](#)

Health Gorilla: upgraded diagnostic integration

Rolling out · Full availability July

[Providers](#) [Clinical Staff](#)

The Health Gorilla integration is moving from the App Directory into the Patient Chart and Clinical Notes directly, adding radiology imaging orders and automated result ingestion along the way.

- ☐ Order labs and radiology imaging directly from the Patient Chart
- ☐ Results automatically ingested — no manual upload required

If Health Gorilla is no longer in your App Directory, it has moved — look for it directly in the Patient Chart and Clinical Notes. If it's still in your App Directory, your account hasn't migrated yet. Enterprise accounts migrate last.

→ [New Health Gorilla workflow](#) → [Interactive walkthrough](#) → [Current workflow guide](#)

🔍 PRACTICE OPERATIONS

Message Center: threaded patient conversations

Early Access · Full availability August

[Front Desk](#) [Clinical Staff](#) [Providers](#)

Patient messages in the Message Center are now grouped into threaded conversations — full message history visible at a glance before responding. How you send and receive messages is completely unchanged.

- ☐ All messages with a patient grouped into one continuous thread
- ☐ Full conversation history visible immediately — no more searching for context
- ☐ No changes to sending or receiving workflows

Currently available on web only — mobile threading is coming in July. Patient-side threading via the patient portal requires portal v2.

→ [Express interest in early access](#)

Rollout schedule

FEATURE	STATUS	AVAILABILITY
Unexpected logout fix	Available now	June 15, 2026
Faster medication list loading	Available now	June 15, 2026
